EMMANUEL L. MOISE
SUPERVISORY PATENT EXAMINER

Allowable Subject Matter

1. This action is in response to the communication dated September 5, 2006 with the amendments to claims 1 and 9.
2. Claims 1-16 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method of negotiating efficient security association establishment between a Mobile Node and network entities. Each independent claim (claims 1 and 9) identifies the uniquely distinct feature of the first network element forwarding the agree-upon security association parameters negotiated between the first network element and the second network element to the mobile node via the first interface. Ohashi et al. (5,596,641) discloses a conventional authentication method in a mobile communication networks, however he fails to anticipate or render the above limitation obvious. Another closest prior art is Magee et al. (2002/0056001) fails to show the agreed-upon security association parameters are forwarded to the mobile node. Magee only discloses in paragraph [0035] the agreed-upon security association parameters are transmitted to the first network element (e.g. proxy CSCF in the visited network, see Magee Fig. 3, element 317) and the first network element using this information to assist in handling user's request (e.g. mobile node, see Magee Fig. 3, element 113).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
